Banking, Housing and Urban  
Affairs

Member, Senate Committee on  
Small Business and  
Entrepreneurship

Member, Senate Committee on  
Budget

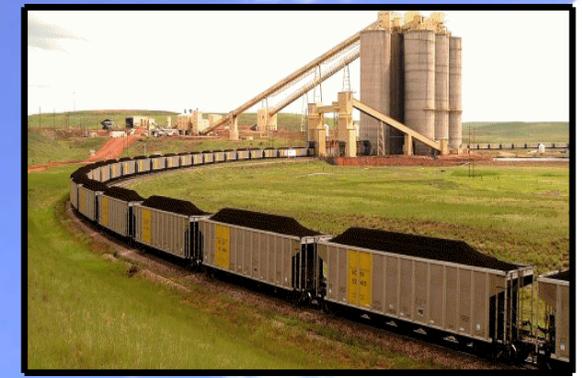

# Eight Steps for Energy Sufficiency

United States Senator  
Mike Enzi  
R-Wyoming

# EIGHT STEPS FOR ENERGY SUFFICIENCY

## Use Less Energy

- ✓ Promote energy efficiency education so Americans know what simple actions save energy.
- ✓ Increase Research and Development for advanced batteries – plug in hybrids will help reduce gas consumption.

## Innovate

- ✓ Provide federal assistance in the development of hydrogen technologies.
- ✓ Research and Development of advanced ethanol technology that is not corn-based.

## Clean Coal Technologies

- ✓ Research and Development funding to help develop and deploy carbon capture and sequestration technologies.
- ✓ Promote loan guarantees for coal-to-diesel production.
- ✓ Provide long term contracting authority for the U.S. Armed Forces to purchase jet fuel from coal.

## Incentives

- ✓ Extend the production tax credit for wind and solar energy for 5 years so developers can perform long-term planning.
- ✓ Repeal of State Mineral Royalty Theft to incentivize states to allow for production on their lands.

## Nuclear

- ✓ Provide tax incentives to help build new nuclear reactors
- ✓ Solve the spent nuclear waste problem.

## Find More American Energy

- ✓ Open up the Outer Continental Shelf to responsible energy production.
- ✓ End the ban on the development of oil shale technology that could produce as much as 2 trillion barrels of American oil.

## Speed the Process

- ✓ Streamline the refinery permitting process – the United States has not built a new refinery in over 30 years.
- ✓ Review the National Environmental Policy Act and find a way to limit the endless filing of lawsuits to stall energy development.

## ANWR

- ✓ Open up less than 1 percent of the Arctic National Wildlife Refuge to energy production. Doing so would produce approximately 1 million barrels of oil per day.
